5.2 V in . ruel repr. of G V = Hom (V, R) is a G-representation via $g \cdot \lambda(v) = \lambda(g^{-1}v) \quad \forall \lambda \in V^*, g \in G, v \in V.$ We have $\overline{\Phi}: Bie_{\kappa}(V) \xrightarrow{\sim} Hom_{\kappa}(V,V^*)$ $b(v_{|W}) = f(v)(w) \stackrel{\overline{\mathfrak{T}}^{-1}}{\longleftarrow} (v \mapsto b(v, -)).$ Now let BilG(V) c Biln(V) be the subspace of G-invariant bilinear form. If $b \in Pail_{G}(V)$, thun $\overline{\Phi}(b)$ is a morphism of G-reps. In fact, $\forall v_i w \notin V \quad \Phi(b)(g \cdot v)(w) = b(g \cdot v, w)$ $g \cdot \overline{\Phi}(b)(v)(w) = \overline{\Phi}(b)(v)(g^{-1}w) = b(v, g^{-1}v).$ and sina b(gv, w) = b(g·v,gg-lv) = b(v,g-lv) we get $\Phi(b)(qv) = q\Phi(b)(v)$.

Now, if V is imducible then also V^* is itereducible because if $W \subset V^*$ is subsep, then $W = \{v \in V \mid \lambda(v) = 0 \forall \lambda \in W\}$ would be a subsep. of V.

Since V, V^* one implicable, we have V, V^* one implicable, we have V, V^* one implicable, V, V^* is V, V^* one implicable.

S.3 We mud to show that dg is left invaint and that
$$\int I dg = 1$$
.

• $\int 1 dg = \frac{1}{|G|} \sum_{g \in G} 1 = 1$

• Fix $h \in G$. $f:G \to C^*$

• $f(hg)dg = \frac{1}{|G|} \sum_{g \in G} f(hg) = \frac{1}{|G|} \sum_{g \in G} f(g)$

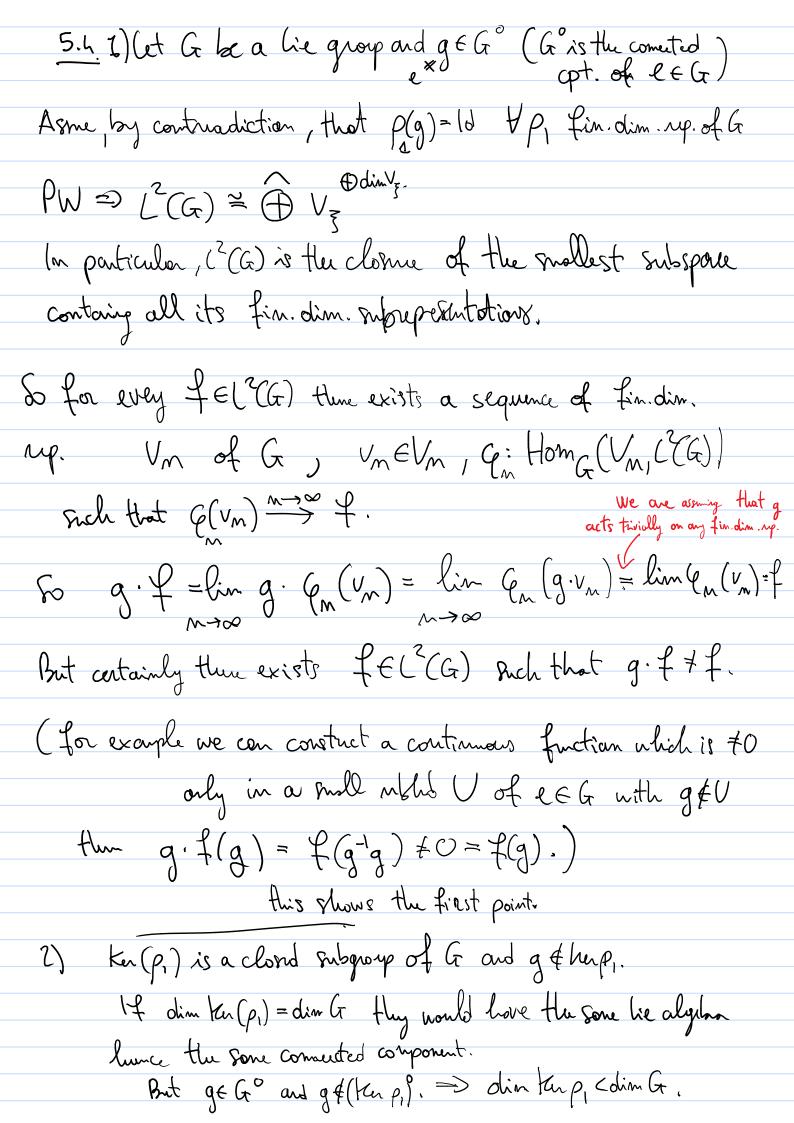

G. Since G finite, $L^2(G) = \{f:G \to C\}$, so

dim (2(G) = |G|.

 $L^2(G) \cong \bigoplus \bigvee_{\zeta \text{ invol.}} \bigoplus \dim \bigvee_{\zeta \text{ invol.}} \bigoplus \bigvee_{\zeta \text{ invol.}}$ Peter-Weyl thm =

=) $|G| = \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{rp. of } G}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.} \\ \text{Vg innd.}}} \dim (^{2}(G)) = \sum_{\substack{\text{Vg innd.$
